

CMA Quotevision™ Creditpulse

Track a more complete picture of the financial markets with intraday access to high quality OTC credit data for credit indices, companies and sovereigns.

Who should use CMA Quotevision™ Creditpulse?

Financial professionals within hedge funds, asset managers and investment banks can benefit from CMA Quotevision™ Creditpulse's accurate intraday OTC credit price data.

Front office professionals

Portfolio managers, traders and analysts gain intraday access to high-quality data, enabling them to:

- **research and analyse** possible trading opportunities
- **track market sentiment** and understand its impact on their positions intraday
- **monitor the market** and their positions in real time.

Risk Managers

CMA Quotevision™ Creditpulse enables risk, compliance and valuation officers to:

- **monitor risk** and identify potential changes in credit quality intraday
- **manage counterparty** risk and collateral requirements.

Complete the picture: intraday, tick by tick CDS market data

The sophistication of the financial marketplace continues to evolve, notably in terms of numbers and types of participants and the availability of information, with up-to-the minute data now critical for many investment decisions. Yet reliable information about credit quality, widely recognised as a key driver of risk, has been remarkably difficult to find.

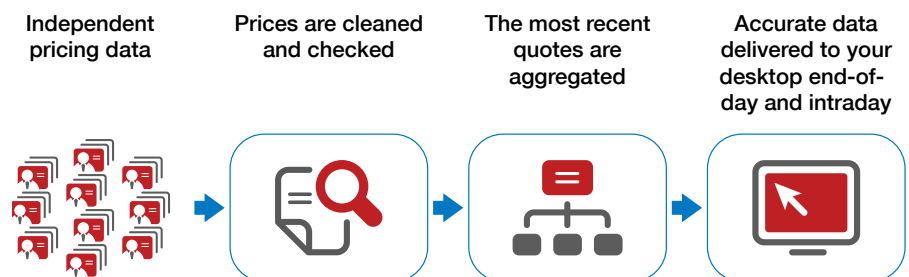

CMA Quotevision™ Creditpulse solves this problem, providing an intraday, tick by tick feed directly from the institutional CDS market. Its user-friendly interface and powerful Excel™ add-in enable you to assess the credit quality of companies and sovereigns on a near live basis – completing the investment picture.

Why use credit default swap data to monitor credit quality?

The most timely and quantitative measure of credit quality is provided by the credit default swap (CDS) market. The market is large, well-quoted and driven by the most sophisticated investors in the world. Participants exchange in excess of a million quotes a day indicating the prices at which they would be prepared to buy and sell credit protection on various companies, municipalities and sovereigns.

Why is CMA Quotevision™ Creditpulse unique ?

In spite of its large size and the high number of quotes within the CDS market, it is extremely difficult to follow the rapidly changing credit quality of companies because the data is difficult to structure and report. CMA Quotevision™ Creditpulse provides you with a clear, structured view, making it easy for traders, salespeople and risk managers to follow the global OTC credit market throughout the day.

Global coverage of the actively traded CDS market

CMA Quotevision™ Creditpulse gives you:

- **1,200 entities per day:** corporate CDS, sovereign CDS, CDS indices and tranches
- **real market quotes:** spread and upfront quotes from actual observed market prices, containing real bid offer spreads
- **high frequency data:** intraday data delivered from London open to New York close
- **historical data:** at least one year of historical data for each entity.

Analyse an issuer's CDS intraday and end-of-day prices

Fast, accurate and easy to use, with an intuitive interface

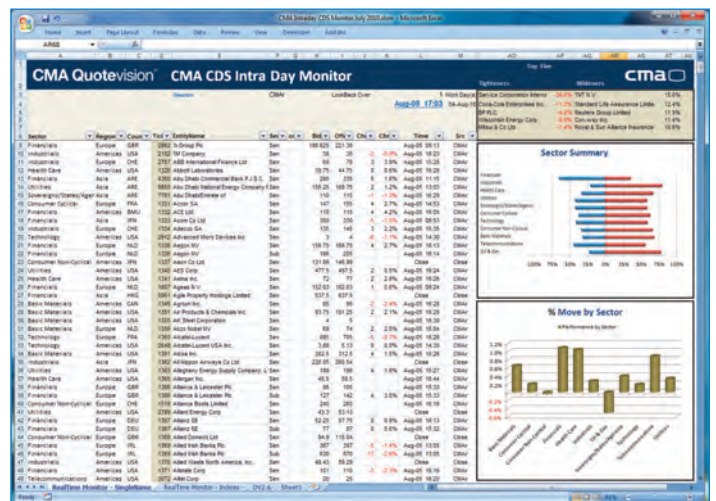

- **Accurate:** act on reliable data that is scanned, validated, scrubbed and cleaned in real-time by our expert CDS market aggregation engine, which is monitored by our team of trained data analysts.
- **Flexible interface:** customise your screen to suit your priorities, eg issuer capital structure analysis, market depth analysis, multiple portfolios, snapshots of price history in graphical and numerical formats.

Monitor a portfolio of CDS and CDS indices

Entity Ticker	Entity Name	Environment Name	Unit	Cost	Last	Change	Last	10 Day	Last	10 Day	Last	10 Day	Change
